Publication No. US20050084906A1

GENERAL INFORMATION:
APPLICANT: GORTSCH, Liliane
APPLICANT: LEGER, Olivier
APPLICANT: LEGER, Olivier
APPLICANT: BECK, Alain
APPLICANT: HAEUW, Jean-Francois
TITLE OF INVENTION: NOVEL ANTI-IGP-IR ANTIBODIES AND USES THEREOF
TILE REFERENCE: 01773-183
CURRENT APPLICATION NUMBER: US/10/735,916A
CURRENT FILING DATE: 2003-12-16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: KLOETZER, WILLIAM S.
APPLICANT: HANNA, NABIL
TITLE OF INVENTION: METHOD FOR PREPARING ANTI-MIF ANTIBODIES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 6;

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers. Claim 1; SEQ ID NO 10; 164pp; French

The invention relates to an isolated antibody (Ab), and its fragments, that bind to human insulin-like growth factor-1 ill and optionally: (1) inhibit natural binding of insulin-factors (IGF)-1 and/or -2; and/or (1) inhibit specifically kinase activity of IGF-1R. Ab and its fragments are used to treat diseases associated with overexpression and/or abnorm IGF-1R and/or epidermal growth factor receptor (EGFR) and/or

ö
                          these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of ICRTR and/or EGFR. This sequence represents an CDR sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder.

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of

Claim 1; SEQ ID NO 10; 125pp; English.

Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.

Specializally initioning tyrosine kinase activity of the receptor, determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a an interaction of the IGF-IR and/or EGFR, and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF and/or IGF2-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or EGF-dependent and/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth and optionally: (1) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endomerrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cytostatic; antipsoriatic; antibody; IGF-IR; tyrosine kinase activity; insulin-like growth factor-1 receptor; EGFR; signal transduction pathway; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

                                             The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or-2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate. Jung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are a also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Disclosure; SEQ ID NO 79; 164pp; French

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or recet diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells, so are useful against cancers of the

The preparation of a medicament intended for the prevention of Library activation of the IGP-IR and/or EGFR, and/or connected with a activation of the IGP-IR and/or EGFR, and/or connected with a activation of the transduction pathway of the signal mediated by the interactivation of the transduction pathway of the signal mediated by the interaction of IGPI or IGP2 with IGP-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGP-dependent, especially IGP1 and/or IGF2.

C dependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is useful for preparation of a medicament intended to inhibit the growth and/or IGF2-dependent and/or EGF-dependent and/or IGF2-dependent and/or EGF-dependent.

C EBFZ/neu-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of the IGF-IR and/or EGFR receptor overexpression or an underexpression of the IGF-IR and/or EGFR receptor is suspected, which involves contacting the sequence is used in the exemplification of the involves contacting the expense in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; heavy chain variable region.

The invention relates to a novel isolated anti-insulin-like growth factor or receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting to human IGF-IR and, if necessary, capable of specifically inhibiting to human IGF-IR and, if necessary, capable of specifically inhibiting to one kind control of comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in a the preparation of a medicament intended for the prevention or treatment of an illness connected with and/or connected with an abnormal activation of the IGF-IR and/or EGFR, and/or connected with an abnormal activation of the IGF or IGF2 with IGF-IR and/or connected with an abnormal activation of the antibody is useful for preparation of the medicament does not induces accondary effects connected with inhibition of the insulan receptor. The antibody is useful for preparation of the connected with inhibition of the insulan receptor. The antibody is useful for preparation of a medicament intended connected with inhibition of the insulan condependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or EGF-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-depende
                                                                                                                                                                                             Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Murine immunoglobulin heavy chain variable region 7C10 VH SEQ ID NO:69.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to a novel isolated anti-insulin-like growth factor

I receptor (IGP-IR) antibody (I) or its functional fragment, being
capable of binding to human IGP-IR and, if necessary, capable of
specifically inhibiting tyrosine kinase activity of the receptor,
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one complementary
comprising a light or heavy chain having at least one capable for the prevention of the IGF-IR and/or Edger, but of the prevention or treatment
cot an illness connected with an overexpression and/or an abnormal
cativation of the IGF-IR and/or Edger, and/or compected with a
hyperactivation of the IGF-IR and/or of Edger, with Edger, and/or of Edger, where
the administration of the medicament does not induce or only alightly
induces secondary effects connected with inhibition of the insulin
creceptor. The antibody is useful for preparation of a medicament intended
to inhibit the transformation of normal cells into cells with tumoral
character, preferably IGF-dependent, especially IGF1 and/or IGF2control or preparation of a medicament intended to inhibit the growth
and/or the proliferation of tumor cells, preferably IGF-dependent
control or IGF-dependent and/or EGF-dependent
control or IGF-dependent and/or EGF-dependent
control or IGF-dependent and/or EGF-dependent
control or IGF-dependent and/or IGF-dependent
control or IGF-dependent intended to inhibit the growth
control or IGF-dependent intended to inhibit the growth
control or IGF-dependent intended to inhibit the growth
control or IGF-dependent intended to inhibit the IGF-dependent
control or IGF-dependent intended to inhibit the IGF-dependent neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetries; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermacological disease; immune disorder; immune disorder; HERZ/neu-dependent cells. (1) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (1) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriasis. (1) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (1) is useful in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGFisolated anti-insulin-like growth factor I receptor (IGF-IR) ody or its functional fragment, being capable of binding human IGF-d specifically inhibiting tyrosine kinase activity of receptor, Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; Duflos A, Haeuw J, Example 13; SEQ ID NO 69; 125pp; English. An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment
                                                                                                                                                                                                                                                                                                                                                                                       Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; andometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                            Gaps
IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                            Human antibody 7C10 1 heavy chain variable region SEQ ID NO:75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Beck A;

of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a cativation of the transduction pathway of the signal mediated by the interactivation of IGFI or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly conducted with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral constants, preferably IGF-dependent, especially IGF1 and/or IGF2.

C dependent and/or EGF-dependent and/or HER2/neu-dependent cells. [1] is useful for preparation of a medicament intended to inhibit the growth capecially IGF1-and/or IGF2-dependent and/or EGF-dependent and/or IGF2-dependent and/or EGF-dependent or IGF2-dependent and/or EGF-dependent or IGF2-dependent or IGF2-dependent and/or EGF-dependent or IGF2-dependent and/or EGF-dependent capecially IGF1-and/or IGF2-dependent and/or EGF-dependent or IGF2-dependent or IG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

                                                                            The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or with these receptors with their ligands. Especially they inhibit transformation of tumor cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the prostate. Iung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriaais. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endorentne disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipportatic; psoriasis; dermatological disease; immune disorder; immunoglobulin; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Murine immunoglobulin heavy chain variable region 7C10 VH SEQ ID NO:52.
New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Anti-IGF-1R related protein #23.

06-MAY-2004 (first entry)

```
The invention relates to a novel isolated anti-insulin-like growth factor

I receptor (IGF-IR) antibody (I) or its functional fragment, being
capable of binding to human IGF-IR and, if necessary, capable of
pecifically inhibiting tyrosine kinase activity of the receptor,
comprising a light or heavy chain having at least one complementary
determining region (CDR) consisting of one of two fully defined 16 anino
caids (ADZ67006 and ADZ67014). An antibody of the invention is useful in
the preparation of a medicament intended for the prevention or treatment
of an illness connected with an overexpression and/or an abnormal
activation of the IGF-IR and/or EGFR, and/or connected with a
hyperactivation of the transduction pathway of the signal mediated by the
induces secondary effects connected with inhibition of the insulin
connectes of IGF-IR and/or EGFR, and/or of EGF with EGFR, where
the administration of the medicament does not induce or only slightly
induces secondary effects connected with inhibition of the insulin
creeptor. The antibody is useful for preparation of a medicament intended
to inhibit the transformation of normal cells with tumoral
character, preferably IGF-dependent, especially IGF and/or IGF2
dependent and/or IGF2-dependent and/or HER2/dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-adpendent or Colon cancer, optendent cells. (I) is useful in the preparation of a medicament intended for the specific targeting the IGF-IR and/or IMF2-adpendent or of IGF2-IMF2-IMF2-Adpendent and/or IMF2-adpendent and/or IMF2-IMF2-IMF2-IMF2-IMF2-IM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                   Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                    Beck A;

This sequence represents a

protein sequence used to generate the Ab of the invention

abnormal expression of IGF-1R and/or EGFR.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-18) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-18. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-18 and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused also for treating psoriasis. Ab are also used to diagnose diseases caused

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal calls, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a

Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with they and growth factor receptor (EGFR) and/or with these receptors with their ligands. Especially they inhibit transformation of numal cells, so are useful against cancers of the proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                   New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated antibody (Ab), and its functional

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6946255

Patent No. 6946255

GENERAL INFORMATION:

APPLICANT: RAYGAXI, NO. 6946255uhiko

APPLICANT: NAKATA, Kideo

APPLICANT: NAKATA, Mocomi

TITLE OF INVENTION: MONOCIONAL ANTIBODY SPECIFICALLY

TITLE OF INVENTION: MONOCIONAL ANTIBODY SPECIFICALLY

TITLE OF INVENTION: MONOCIONAL ANTIBODY SPECIFICALLY

TITLE OF INVENTION: RAZTING WITH FAS LICAND AND PRODUCTION PROCESS THEREOF

NUMBER OF SEQUENCES: 31

CORRESPONDENCE ADDRESS: 31

TORRESPENDENCE ADDRESS: 31

GENERAL INCOMMATION:
APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe
APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe
TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of Improving Polypeptides
FILE REPERBNE: P1123CIT
CURRENT APPLICATION NUMBER: US/09/296,005
CURRENT FILING DATE: 1999-04-21
EARLIER APPLICATION NUMBER: US 08/887,352
EARLIER FILING DATE: 1997-07-02
NUMBER OF SEQ ID NOS: 26
SEQ ID NO 2
LENGTH: 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Sequence 2, Application US/08887352B

Sequence 2, Application US/08887352B

Patent No. 5994511

GREERAL INFORMATION:

APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of TITLE OF INVENTION: Improving Polypeptides

NUMBER OF SEQUENCES: 26

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genentech, Inc.

STREET: IDAM May

CITY: South San Francisco

STATE: California

COUNTRY: USA

Sequence 2, Application US/09716028

Sequence 2, Application US/09716028

GENERAL INFORMATION:
TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of Improving Polypeptides
FILE REFERENCE: P1123R1

CURRENT APPLICATION NUMBER: US/09/716,028

CURRENT FILING DATE: 2000-11-17

PRIOR FILING DATE: 1998-06-30

PRIOR FILING DATE: 1998-06-30

PRIOR FILING DATE: 1997-07-03

NUMBER OF SEQ ID NOS: 44

SEQ ID NO 2.

LENGTH: 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                           December 30, 2005, 13:33:42; Search time 118.968 Seconds (without alignments) 56.194 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2

Publication No. US20040173385A1

GENERAL INFORMATION:
APPLICANT: MARKS, JAMES D.
APPLICANT: MARKS, JAMES D.
TITLE OF INVENTION: THERAPEUTIC MONOCLONAL ANTIBODIES THAT NEUTRALIZE BOTULINUM
TITLE OF INVENTION: NEUROTOXINS
TITLE OF INVENTION: NUMBER: US/10/632,706
CURRENT APPLICATION NUMBER: US/10/632,706
CURRENT APPLICATION NUMBER: US 60/400,721
PRIOR FILING DATE: 2002-08-01
PRIOR FILING DATE: 1998-08-01
PRIOR FILING DATE: 1998-08-31
NUMBER OF SEQ ID NOS: 278
SOFTWARE: PAECHLIN VERSION 3.2
SEQ ID NO 67
LENTING TO A SEQ ID NOS: 278
SEQ ID NO 67
LENTING TO A SEQ ID NOS: 278
SEQ ID NO 67
LENTING TO A SEQ ID NOS: 278
SEQ ID NO 67
## APPLICANT: Amersdorfer, Peter
TITLE OF INVENTION: Therapeutic Monoclonal Antibodies That Neutralize
TITLE OF INVENTION: Abellinum Neurotoxins
FILE REFERENCE: 2500.117050
CURRENT FILING DATE: 1998-08-31
NUMBER OF SEQ ID NOS: 198-08-31
NUMBER OF SEQ ID NOS: 20
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-18-249-2

Sequence 2, Application US/09858349

Patent No. US20020012909A1

GENERAL INFORMATION:

APPLICANT: PLAKSIN, Daniel

TITLE OF INVENTION: SMALL FUNCTIONAL UNITS OF ANTIBODY HEAVY CHAIN VARIABLE REGIONS
FILE REFERENCE: 87534-2800

CURRENT FILING DATE: 2000-06-02

NUMBER OF SEQ ID NOS: 16

SOFTWARE: Patentin version 3.1

SEQ ID NO 2

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
